-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 3747

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 45 is rejected under 35 U.S.C. 103(a) as being unpatentable over Klinger in view of Rembold ('718).

Klinger teaches a fuel rail system having two pumps and pump (17) includes a bypass valve (Figure 2) which is open when pump output is not required. The reference is somewhat ambiguous with regard to whether or not the valve is normally open and then driven closed by the solenoid, however this is one of two choices and it would have been obvious to pick this choice since the open state is the more common one (i.e. only closed for maximum output, not low or intermediate output).

Rembold teaches a fuel rail system very similar to the Klinger system but also including a return line connecting the fuel rail to the inlet of the high pressure pump (see Figure 10 and valve (74)). This method of refining the pressure regulation of the pump is common in the art and thus would have been obvious to incorporate into the Klinger system.

Claims 1-9, 14-20, 33-41, 43-44, 46-47 and 49-53 are allowed.

Applicant's arguments filed February 8, 2004 have been fully considered but they are not persuasive. In particular, Claim 45 has been rejected upon further consideration of its limitations. Since the subject matter was indicated as allowable in the previous office action, this action has been made non-final.
